

Zaprio IoT Cloud

Ubiquitous computing, built and run on the cloud, powered by AI (AI) technology, for every type of

INTERNET OF THINGS

Cloud Lights Up New IoT Experiences for OEM Products

The IoT cloud platform collects and stores the data from your connected IoT devices, features processing software services and artificial intelligence to turn data into actionable insights. These insights then drive actions in the form of alerts and notifications, and remote control of devices and equipment.

Zapario Enables OEMs to Deliver New IoT Experiences

Zapario combines the virtually limitless computing power and intelligence of the cloud with smart, connected, and perceptive assets at the edge of the network to enable OEMs to deliver immersive and impactful IoT experiences to their end customers.

Accelerate your business in the IoT era

Our mission is to help you accelerate your business in the IoT era by providing a comprehensive suite of cloud services that enable you to manage your IoT devices, collect and analyze data, and build applications that leverage the power of the cloud.

With our cloud services, you can:

• Manage your IoT devices from a single console.

• Collect and analyze data from your IoT devices in real-time.

• Build applications that leverage the power of the cloud.

• Scale your business to meet the demands of the IoT era.

• Reduce your operational costs and improve your efficiency.

• Increase your revenue and grow your business.

• Simplify your IoT architecture and reduce complexity.

• Ensure the security and privacy of your IoT data.

• Integrate your IoT data with your existing business systems.

• Provide a seamless user experience for your IoT applications.

• Leverage the power of AI and analytics to optimize your IoT operations.

• Build a future-proof IoT architecture that can evolve with your business.

• Accelerate your time to market for new IoT products and services.

• Gain a competitive edge in the IoT market.
